

Phoenix Collective

Partner overview: for organizations, hubs and programs that support local businesses and builders

We help businesses get found, get online and get connected, with people on the ground and simple tools that always leave a human in control. We work alongside the organizations that already support businesses and builders, not in place of them.

What we do

For business

- Free Google Maps check
- Maps listing cleanup
- One-page websites
- Starlink setup help
- Content drafts that wait for your approval before posting
- Receipt and proof packs for your bookkeeper

For partners

- Referrals both ways: send us businesses that need hands-on help, and we point people back to your programs
- Co-delivery of workshops, clinics and intake days
- On-the-ground help with setup and follow-through

For developers

- MCP connect: plug tools and agents into shared, live data
- Open governance docs and decision records
- On-chain proof and approvals on Solana
- Open-source projects (coming)

How a partnership works

- **Listen first.** We learn where your members get stuck before anything gets built.
- **Start small.** One clear problem, one visible result, then we decide together what comes next.
- **Your relationships stay yours.** Partners share as much or as little as they choose, and nothing goes out under your name without your approval.

Who we're a good fit for

Economic development offices, business and employment programs, chambers, co-working hubs, builder communities and ecosystem groups across Nova Scotia and beyond.
